Uncertainty, Expectations, and Financial Instability
2014-11-11

Eric Barthalon applies the neglected theory of psychological time and memory decay of Nobel Prize–winning economist Maurice Allais (1911–2010) to model investors’ psychology in the present context of recurrent financial crises shaped by the behavior of the demand for money during episodes of hyperinflation. Allais’s theory proves economic agents perceive the flow of clocks’ time and forget the past at a context-dependent pace rapidly in the presence of persistent and accelerating inflation and slowly in the event of the opposite situation. Barthalon recasts Allais’s work as a general theory of “expectations” under uncertainty, closing the gap between economic theory and investors’ behavior. Barthalon extends Allais’s theory to the field of financial instability, demonstrating its relevance to nominal interest rates in a variety of empirical scenarios and the positive nonlinear feedback that exists between asset price inflation and the demand for risky assets. Reviewing the works of the leading protagonists in the expectations controversy, Barthalon exposes the limitations of adaptive and rational expectations models and by means of the perceived risk of loss calls attention to the speculative bubbles that lacked the positive displacement discussed in Kindleberger’s model of financial crises. He ultimately extrapolates Allaisian theory into a pragmatic approach to investor behavior and the natural instability of financial markets. He concludes with the policy implications for governments and regulators, balanced and coherent. This book will be invaluable to researchers working in macroeconomics, financial economics, corporate responsibility for human rights, and impacts new expectations and paradigms.

this book deals with economic theory not methodology it does employ certain methodological resolutions these resolutions and the limitations they impose on the nature and the scope of the analysis are reviewed the first resolution concerns what kind of a theory is to be discussed the word theory may mean many things it may mean a hypothesis put forward as an explanation of something an idea or a notion in a normative sense it may mean a recommendation a rule or principle to be followed in science it usually means a system of hypotheses to be accepted as an explanation of certain facts a set of general laws and principles it is also used to distinguish the general principles and methods of a subject from the practice of it the theory with which this volume is concerned is that of science in very general terms it may be defined as a system of hypotheses one following from another which permits the reader to derive from known facts and predictions of other facts if the knowledge of the fact which we predict is important for us in the sense that it permits us to achieve better the objectives we pursue the theory may have a practical value this book is therefore not only a contribution to the analysis of expectations but also an introduction to a number of selected topics in economic theory

it is an unfortunate but unavoidable feature of even well ordered democratic societies that governmental administrative agencies often create legitimate expectations procedural or substantive on the part of non governmental agents individual citizens groups businesses organizations institutions and instrumentalities but find themselves unable to fulfil those expectations for reasons of justice the public interest severe financial constraints and sometimes harsh political realities how governmental administrative agencies operating on behalf of society handle the creation and frustration of legitimate expectations implicates a whole host of values that we have reason to care about including under non ideal conditions not least justice fairness autonomy the rule of law responsible uses of power credible commitments reliance interests security of expectations stability democracy parliamentary supremacy and legitimate authority this book develops a new theory of legitimate expectations for public administration drawing on normative arguments from political and legal theory brown begins by offering a new account of the legitimacy of legitimate expectations he argues that it is the very responsibility of governmental administrative agencies for creating

moral expectation is a concept with which all of us are well acquainted already as children we learn that certain courses of action are expected of us we are expected to perform certain actions and we are expected to refrain from other actions furthermore we learn that something is morally wrong with the failure to do what we are morally expected to do a central theme of this book is that moral expectation should not be confused with moral obligation while we are morally expected to do everything we are obligated to do a person can be morally expected to do some things that he or she is not morally obligated to do although moral expectation is a familiar notion it has not been the object of investigation in its own right in the early chapters mellema attempts to provide a philosophical account of this familiar notion distinguish it from other types of expectations and show how it is possible to form false moral expectations subsequent chapters explore the role of moral expectation in agreements between people analyze ways that people avoid moral

it is claimed in this book that expectations should not necessarily be treated as
unobservable variables and that there is much to be learned from survey data a
unique data set is examined the output of surveys conducted twice a year since 1952
among informed italian businessmen and economic experts the predictive accuracy
rationality and determinants of inflation expectations are investigated following an
extensive analysis of measurement issues the estimate of inflation expectations are
evaluated for both wholesale and consumer price changes comparing them with those
held by respondents to other surveys for different countries and with the forecasts
generated by alternative predictors of the inflation process the expectations considered in the study are shown to be remarkably accurate anticipating all major price changes even if during the years of high and rising inflation which have followed the first oil crisis they appear to underestimate on a number of occasions the inflation rates actually experienced as the alternative predictors also do an accurate testing of the rational expectations hypothesis is conducted rejecting it over the entire sample period but not for the period of mild but variable inflation which preceded the first oil crises it is shown that a mixed adaptive regressive model with both error learning and return to normality components adapts very well to the data considered in this study and that inflation expectations are also influenced by an uncertainty component which affects the adaptive coefficient furthermore regression towards normality is slowed down when industrial capacity is utilized above normal and vice versa many other issues such as the dispersion of individual answers the problems of aggregation and measurement error are also considered and an extensive bibliography of other works where use is made of direct information on expectations is included
