corneal complications of measles was not very obvious everyone knew of the kerato conjunctivitis of measles and considered it to be an innocuous feature of the disease every medical worker in developing countries knew that measles in under or malnourished children runs a very serious course leading to e g corneal the latter are seen frequently that medical workers in complications developing countries are in the habit of speaking of post measles blind ness the aspect of the cornea in post measles blindness is reminiscent of the keratomalacia in vitamine a deficiency and kwashiorkor it was suggested that in measles the last reserves of vitamine a are exhausted thereby precipitating the keratomalacia the virological origin of measles keratitis has been more or less neglected in literature up till now this study provides clinical and laboratory data concerning the kerato conjunctivitis of measles gathered from a number of hospitalized children in a rural area of kenya the merits of this monograph is that it gives a careful description of the clinical course of measles keratoconjunctivitis and that it emphasizes the role of the virus infection in addition to protein deficiency and vitamine a deficiency in the etiology of post measles blindness the possible roles of exposure in semi comatose patients and of the application of traditional autochthone medicine are mentioned measles is no longer seen in developed countries but will still be encountered in the developing countries written by a team of world renowned renal pathologists this book provides a compact and up to date resource beginning with the basic concepts and methods in renal pathology the text covers renal anatomy including gross and microscopic appearance and pathogenic mechanisms in renal diseases emphasizing clinical pathological correlation and differential diagnosis the handbook discusses glomerular disease systemic diseases vascular diseases rejection and much more 107 photographs 84 in color in recent years the knowledge of how renal damage occurs in patients with plasma cell dyscrasias myeloma has substantially increased for the first time this publication brings together issues relating to the diagnosis and pathogenesis of these disorders as well as a summary of advances achieved in the treatment and management of patients several chapters are devoted to various
glomerulopathies associated with deposition of immunoglobulin light and heavy chains including those associated with amyloidosis the sequential events are pointed out crucial steps and key molecules open to modulation or control are delineated and therapeutic advances are highlighted although the emphasis is on the management of cases with renal involvement a distinct focus on the diseases as a whole and their impact on patients general health and prognosis has been maintained throughout the discussions using a translational approach to renal manifestations in patients with plasma cell dyscrasias myelomas this publication conveys a comprehensive state of the art view of the subject it is aimed at practicing renal pathologists nephrologists internists and hematologists as well as at trainees and scientists working in these specialties new an ebook version is included with print purchase the ebook allows you to access all the text figures and references with the ability to search customize content make notes and highlights and have content read aloud plus it includes prescriptions for oral diseases differential diagnosis of clinical cases and practice questions updated content on the latest breakthroughs in oral squamous cell carcinoma treatment hpv and molecular pathology addresses some of today s leading topics in oral pathology research
