the access network is expected to be one of the major battlegrounds of telecommunications network operators since upgrades of the existing narrowband access network will be the critical factor in supplying multimedia broadband services in a competitive market the future broadband access network architecture needs to be flexible enough to efficiently support the provision of a full set of broadband and narrowband services with a wide range of capacity demands a wide range of broadband access technologies are available furthermore the key issues in the upgrading of the very cost sensitive access network are financial as well as technological both for incumbent and new entrant operators thus in order to identify minimum risk introductory strategies the economic viability of access network broadband upgrades needs to be carefully assessed however despite the definite need for techno economic evaluations very few books have been published in this field one of the reasons might be that broadband access network upgrading only very recently gained wide recognition as a key challenge for broadband delivery secondly this kind of strategic work and these studies tend to be considered rather sensitive by operators and thus both results and methodologies are not usually readily available thirdly the work reported in this book in many respects was a major pioneering effort which quite ambitiously aimed at modelling the whole life cycle costs and revenue streams of access network upgrades as opposed to several other efforts which often are limited to pure investment cost comparisons

there has been a great deal of recent interest in masculine clothing examining both its production

and consumption and the ways in which it was used to create individual identities and to build

businesses from 1850 onwards drawing upon a wide range of sources this book studies the

interaction between producers and consumers at a key period in the development of the ready

made clothing industry it also shows that many innovations in advertising clothing usually

considered to have been developed in america had earlier british precedents to counter the lack of

documentary evidence that has hitherto hampered research into the dress practices of non elite

groups this book utilises thousands of unpublished visual documents these include hundreds of

manufacturers designs which underline an unexpected degree of investment by manufacturers in

boys clothing and which was matched by heavy investment in advertising with thousands of images

of boys clothing for shop catalogues in the stationers hall copyright archive another key source is

the archives of dr barnardo s homes this extraordinary collection contains over 15 000 documented

photographs of boys entering between 1875 and 1900 allowing us to look beyond official

polarization of raggedness and respectability used by charities and social reformers of all stripes

and to establish the clothing that was actually worn by a large sample of boys a close analysis of 1

800 images reveals that even when families were impoverished they strove to present their boys in

ways that reflected their position in the family group and in society by drawing on these visual

sources and linking the design and retailing of boys clothing with social cultural and economic issues

this book shows that an understanding of the production and consumption of the boys clothing is

central to debates on the growth of the consumer society the development of mass market fashion

and concepts of childhood and masculinity

Software and systems traceability provides a comprehensive description of the practices and theories of software traceability across all phases of the software development lifecycle. The term software traceability is derived from the concept of requirements traceability. Requirements traceability is the ability to track a requirement all the way from its origins to the downstream work products that implement that requirement. Software traceability is defined as the ability to relate the various types of software artefacts created during the development of software systems. Traceability relations can improve the quality of a product being developed and reduce the time and cost of development. More specifically, traceability relations can support evolution of software systems, reuse of parts of a system by comparing components of new and existing systems, validation that a system meets its requirements, understanding of the rationale for certain design and implementation decisions, and analysis of the implications of changes in the system.

Crew resource management (CRM) training was first introduced in the late 1970s as a means to combating an increased number of accidents in which poor teamwork in the cockpit was a significant contributing factor. Since then, CRM training has expanded beyond the cockpit for example to cabin crews, maintenance crews, health care teams, nuclear power teams, and offshore oil teams. Not only has CRM expanded across communities, it has also drawn from a host of theories from multiple disciplines and evolved through a number of generations. Furthermore, a host of methodologies and tools have been developed that have allowed the community to better study and measure its effect on team performance and ultimately safety. Lacking however is a forum in which researchers and practitioners alike can turn to in order to understand where CRM has come from and where it is going. This volume, part of the Critical Essays on Human Factors in Aviation series, proposes to do just that by providing a selection of readings which depicts the past, present, and future of CRM research and training.

Integrating pest management dissemination and impact volume 2 is a sequel to integrated pest management innovation development process volume 1. The book focuses on the IPM systems in the developed countries of North America, Europe, and Australia, and the developing countries of Asia, Latin America, and Africa. One of the major impediments in the dissemination and adoption of the IPM innovation is the complexity of the technology and reaching the vast population of farmers, especially in the developing countries. The IPM innovation development process is incomplete without the diffusion and adoption of IPM methods by the end users and through its consequences. In spite of all the efforts in the developed and developing countries, the adoption of IPM is still low with few exceptions. The book covers the underlying concepts and methodologies of the diffusion of innovation theory and the program evaluation and reviews the progress and impact of IPM programs implemented in the industrialized the green revolution and the subsistence agricultural systems of the world. Forty-four experts from entomology, plant pathology, environmental science, agronomy, anthropology, economics, and extension education from Africa, Asia, Australia, Europe, North America, and South America have discussed the impact of IPM with an interdisciplinary perspective. Each one of the experts is an authority in his or her field of expertise. Researchers, farmers, educators, supporting policies of the governments, and market forces are the elements of the IPM innovation system to achieve wider adoption of IPM strategy in agriculture.
