entries sideyards hillsides waterfront cover this book presents a comprehensive history of the development of catholic church architecture in hong kong from its birth as a british colony in the mid 19th century and development as an international financial hub throughout the 1900s to its handover from british to chinese sovereignty in 1997 and subjection to a radical mainlandisation process in the 2020s the author describes how the geopolitics of each period shaped the architectural forms and usage of churches in ways that have radically distinguished them from their western counterparts the book also describes how the role of lay catholics in the building of churches in hong kong grew from almost nothing in the 1950s when most were refugees to being one of dominance and responsibility as society matured in the late 20th century and catholic lay movements flourished worldwide with the development of new spiritualities consciousness of the significance of faith in everyday life among catholics in hong kong deepened profoundly this book presents an in depth study of catholic building professionals as a significant example showing how architects engineers and builders pursued their spiritual growth through a deep involvement in church building projects
the 2020s left Hong Kong in a state of profound political and social flux. The virtual trashing of the one country two systems policy has seriously curtailed freedom, especially of speech and media, and placed religion under extreme threat. Nevertheless, there are still examples of Catholics striving to live out their faith. Those dedicated to building and caring for churches in this special administrative region of China are the worthy subjects of this study.
