the automobile is an icon of modern technology because it includes most aspects of modern engineering and it offers an exciting approach to engineering education of course there are many existing books on introductory fluid aero dynamics but the majority of these are too long focussed on aerospace and don t adequately cover the basics therefore there is room and a need for a concise introductory textbook in this area automotive aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero fluid mechanics for engineering students it introduces basic concepts and fluid properties and covers fluid dynamic equations examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced this text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero fluid mechanics this textbook contains complex mathematics which not only serve as the foundation for future studies but also provide a road map for the present text as the chapters evolve focus is placed on more applicable examples which can be solved in class using elementary algebra the approach taken is designed to make the mathematics more approachable and
easier to understand key features concise textbook which provides an introduction to fluid mechanics and aerodynamics with automotive applications written by a leading author in the field who has experience working with motor sports teams in industry explains basic concepts and equations before progressing to cover more advanced topics covers internal and external flows for automotive applications covers emerging areas of aeroacoustics and heat transfer automotive aerodynamics is a must have textbook for undergraduate and graduate students in automotive and mechanical engineering and is also a concise reference for engineers in industry

the british attitude towards germany seems to be ambiguous there are still many world war ii movies on television there are serious newspaper articles
and hostile tabloid cartoons unfriendly governmental memos and last but not least advertising the people dealing with this issue are of different
political backgrounds therefore they have contradictory intentions and express either friendly or hostile opinions nevertheless certain stereotypes of
germans are recurrent regardless of which attitude is represented the two following lists of german attributes have only recently been compiled the
first one is the result of the chequers conference in march 1990 when margaret thatcher discussed the aspects of german reunification with some
confidence the conferences consensus on eternal german characteristics was insensitivity to the feeling of others aggressiveness assertiveness bullying
egotism the memo was not designed to be published therefore one can assume that the participants spoke frankly several other german features can be
found in a poll in which students were asked about national characteristics according to the majority germans are orderly disciplined organised
efficient obedient to rules inflexible punctual hard working laborious and ambitious arrogant particularly in intellectual matters complex difficult to
understand angst ridden my paper will focus on the occurrence of several of these images in advertising especially in four campaigns released between
1993 and 1997 three of them deal with german products promoted for german consumers one of them deals with a british product for the british
market but refers to anglo german conflict in order to tell its story we will see that especially the stereotypical german virtues as mentioned above are
applied in order to emphasise the value of the goods in contrast one example shows how negative images are used to show british superiority
