Infectious Diseases and Bioterrorism 2023-06-22 abstract

Biosecurity and Bioterrorism 2008-03-06 The working paper is divided into two main parts: the first part is a descriptive analysis of the illicit use of biological agents by criminals and terrorists. It draws on a series of case studies documented in the second part. The case studies describe every instance identifiable in open source materials in which a perpetrator used acquired or threatened to use a biological agent while the inventory of cases is clearly incomplete. It provides an empirical basis for addressing a number of important questions relating to both biocrimes and bioterrorism. This material should enable policymakers concerned with bioterrorism to make more informed decisions. In this project, the author has researched over 270 alleged cases involving biological agents. This includes all incidents found in open sources that allegedly occurred during the 20th century. While the list is certainly not complete, it provides the most comprehensive existing unclassified coverage of instances of illicit use of biological agents.

Bioterrorism and Biocrimes 2002 This important disturbing and timely book focuses on the use of disease and germs as a weapon of mass destruction (WMD) and the threat bioterrorism poses in an increasingly unpredictable and volatile future for the world. For context, it traces developments from the earliest primitive but effective days of infectious rams, poison-tipped arrows, and plague-infected corpses used as toxic disease spreading projectiles to the twenty-first century industrial-scale weaponization of biomedicine. Paul Chrystal shows how biological weapons and acts of bioterrorism are especially effective at instilling terror, panic, death, famine, and economic ruin on a large scale, shredding public confidence in governments and civilization itself for the disaffected. Lethal biological agents are comparatively easy to manufacture and obtain, and they have the benefit of being almost invisible and easy to administer. In lethal quantities, through a variety of discreet delivery systems, just what the terrorist wants. We explore the sinister connection between the industrial-scale proliferation of biological weaponry by state actors and the greater opportunities these growing bio arsenals give to the increasingly scientific-minded and determined terrorist to manufacture his or her weapon of choice taking advantage also of the state of the art, sophisticated delivery systems. The epilogue analyzes the concerted, but groundless, 2022-2023 disinformation campaign conducted by Russia with support from China, relating to the claim that public health facilities in Ukraine are secret u
s funded biolabs purportedly developing biological weapons
