This volume describes the eight data protection principles and the registrar's interpretation of them and looks at the data subject's right under the act. It relates the provisions of the act to points which should be considered in the design and maintenance of computer systems to ensure compliance with the law. The secure movement of data, the physical security of computer hardware, software, and data, the importance of the people involved in running the system, and the principles of audit and control are all discussed in relation to the data protection act.

professionals working in child welfare and child protection are making decisions with crucial implications for children and families on a daily basis. The types of judgements and decisions they make vary and include decisions such as whether to substantiate a child abuse allegation, whether a child is at risk of significant harm by parents, and whether to remove a child from home or to reunify a child with parents after some time in care. These decisions are intended to help achieve the best interests of the child. Unfortunately, they can sometimes also doom children and families unnecessarily to many years of pain and suffering. Judgments and decisions in child welfare and protection are based to a large extent on the formidable knowledge base on child abuse and neglect created over the years to support this professional task. Nevertheless, making decisions in complex and uncertain environments is fraught with many difficulties and shortcomings. There are in fact many indications that decisions in this area are not reliable and there are many errors in
judgment that could be avoided had the decision makers relied on existing knowledge on decision making under uncertainty and followed appropriate procedures much needs to be improved on how these decisions are made by individual professionals and child welfare agencies

The rise of China is changing the strategic landscape globally and regionally. How states respond to potential threats posed by this new power arrangement will be crucial to international relations for the coming decades. This book builds on existing realist and rationalist concepts of balancing bandwagoning commitment problems and asymmetric information to craft explanations about how states respond when faced with potential threats. Specifically, the book explores the role different types of uncertainty play in potential balancing situations. Particular focus is given to the nature of the rising state’s actions, the balance of forces, and the value of delay. These concepts are analyzed and illustrated through a series of case studies on Europe in the 1930s as well as the present day Southeast Asia, looking at great powers such as Britain and France but also a wide range of smaller powers including Poland, Yugoslavia, Vietnam, and the Philippines.

cconcern is often expressed that our environment may include an increasingly large variety of mutagens but the extent of the potential hazard they pose has yet to be fully evaluated a variety of empirical procedures has been devised with which to estimate the mutagenic potency of suspect agents and the relative merits of different tests are currently under debate although such tests are of great value and are indeed indispensable they are not nevertheless sufficient in the long term accurate estimation of hazard will also require a better understanding of the various mechanisms of mutagenesis and in many instances these remain remarkably elusive our knowledge and appreciation of the problem has increased substantially over the last few years but the precise way
in which many mutagens cause mutations is not yet known the aims of this conference were therefore two fold the first was to survey present information about mutagenic mechanisms drawing together data from work with various experimental approaches and organisms in order to discern the principles governing the action of different mutagens the second was to examine the implications of such principles for the execution and evaluation of test procedures and critically assess the research areas that need further attention in order to improve the interpretation of test results chris lawrence v acknowledgement we gratefully acknowledge the support provided for this conference by the u s department of energy the foundation for microbiology exxon corporation and the university of rochester

in response to the chief of naval operations CNO the National Research Council appointed a committee operating under the auspices of the Naval Studies Board to study the national security implications of climate change for U.S. naval forces in conducting this study the committee found that even the most moderate current trends in climate if continued will present new national security challenges for the U.S. Navy Marine Corps and Coast Guard while the timing degree and consequences of future climate change impacts remain uncertain many changes are already underway in regions around the world such as in the Arctic and call for action by U.S. naval leadership in response the terms of reference directed that the study be based on Intergovernmental Panel on Climate Change IPCC scenarios
and other peer reviewed assessment therefore the committee did not address the science of climate change or challenge the scenarios on which the committee's findings and recommendations are based. National security implications of climate change for U.S. naval forces addresses both the near and long-term implications for U.S. naval forces in each of the four areas of the TOR and provides corresponding findings and recommendations. This report and its conclusions are organized around six discussion areas all presented within the context of a changing climate.
