2018-05-01

extending horizons presents a wide ranging collection of papers by leading practitioners in the field of analytic psychotherapy with children and young people surveying recent developments in technique and theory the application of the discipline to special areas of work and its integration in certain contexts with other systems such as family and group psychotherapy from its origins in the traditional one to one relationship between therapist and patient as exemplified in the pioneering work of anna freud melanie klein and margaret lowenfeld the contributors to this present
volume demonstrate how child and adolescent psychotherapy has advanced its frontiers in recent years to deal with specific areas of concern such as child sexual abuse and mental or physical disability and adapted itself sometimes initially as a result of pressures imposed by the lack of adequate resources to applications in wider settings where multi disciplinary factors are engaged and the one to one relationship is waived in preference to parent child family or group modes of treatment

Through Assessment to Consultation

2009-05-07

winnicott's description of doing something else or working as a psychoanalyst when not engaged in the actual analysis of his patients resonates with the child psychotherapist today individual psychotherapy is certainly a valuable part of the work but much of the time the cpt is doing something appropriate to the occasion some of this time is spent in assessment work for therapy for the multi professional team and for other agencies and some in consultation to colleagues and other professional staff or in a combination of the two drawing from the independent tradition in psychoanalysis through assessment to consultation explores the application of psychoanalytic thinking to this daily work reflecting on what is actually done and why contributors to the three sections assessment overlaps consultation and beyond provide a variety of clinical illustrations as they describe a range of approaches and settings in the tasks of both assessment and consultation ranging from the light impact of the analyst's presence in the grief of post 9 11 new york to the call to political potency of beyond consultation this book will help both new and experienced child and adolescent psychotherapists re examine their role and function in the team and in the outside world and will also be of interest to specialist health workers educational psychologists and those wanting to explore more winnicottian approaches to therapeutic work
Countertransference in Psychotherapy with Children and Adolescents

1992

countertransference was believed at one time to consist of the subjective reactions of the therapist whose own unresolved conflicts had been reactivated by the patient's transference. More recently, however, it has been recast to include the totality of the therapist's attitudes, fantasies, and emotional reactions to the patient. While this important topic has received increased attention in the mental health literature in recent years, little attention has been paid to countertransference encountered in child and adolescent psychotherapy. This book focuses on countertransference in the psychotherapy of children and adolescents in detail. It offers the child and adolescent therapist an invaluable opportunity to explore countertransference in substantial depth and in a variety of clinical encounters across the wide spectrum of child and adolescent psychopathology. Perhaps most importantly, it normalizes the topic of transference in the psychotherapy of children and adolescents and in so doing highlights the clinician's subjective experience as central to the process of psychotherapy.

2020-04-08

therapy referrals for a child or young person can be motivated for a number of reasons the parents carers or professionals responsible for their wellbeing might describe a sudden change in presentation risk taking behaviour such as self harm or experimentation with drugs alcohol or sex or they might label the young person as over reacting under reacting or attention seeking such behaviour prompts concern for their safety and confusion about why the child or young person is presenting the way they are this book offers a thoughtful approach to making sense of such behaviour and encourages adults to reflect on rather than react to young peoples outward presentations based on the author s work with children young people and families over two decades this book shares reflections from the therapy room and illustrates how the therapist can try to make sense of mood behaviour and presentations that previously made no sense the content relies heavily on clinical experience as well as drawing on classical and contemporary psychotherapeutic literature so often adults find themselves reacting to observable behaviour in a judgmental or punitive way rather than pausing to consider what the behaviour might be communicating the author aims to model a thoughtful reflective approach to making sense of what might be going on for children and young people and this book will be of great interest to child and adolescent psychotherapists related professionals and those with an interest in young persons mental health

The book includes contributions from Audrey Adeyemi, Tasha Bailey, Kelly Brackett, Jamie Butterworth, Alix Hearn, Evania Inward, Irene Mburu, Sasha Morphitis, Magda Racznyska, Nadja Rolli, Zisi Schleider, and Anna Tuttle. One Tree Many Branches celebrates the twentieth anniversary of the pioneering child and adolescent psychotherapy and counselling training organisation Terapia and the achievements of its trainees, tutors, and staff who provide highly specialised counselling psychotherapy and bespoke mental health services for young people. Children, parents, and families. Terapia works with individuals, organisations, schools, and the statutory and non-statutory sector and is a strong voice for child psychotherapy as a distinct and specialist profession. Therapeutic work with children requires a different set of skills and knowledge to that of adult psychotherapists. For example, much of the work is non-verbal and uses play and metaphor alongside talking. It also requires involvement with the system around the child such as parents, families, and professionals and the management of conflicting agendas and politics to act on behalf of the child. Subjects discussed within its pages include ecopsychology, autism, the lack of male psychotherapists working with refugees, racial trauma, female genital mutilation, working in closed communities, and foetal alcohol spectrum disorder. The book is essential reading for all who work with children and opens up exciting and pioneering new approaches for meeting the multifarious needs of our children and adolescents today.
