Now in its 10th edition, the AHRI-endorsed Human Resource Management Strategy and Practice provides a strong conceptual and practical framework for students of human resource management. The successful integrative strategic HRM model is retained, and the most recent developments in human resource management theories and practices are explored. A multitude of contemporary regional and international examples are incorporated throughout, alongside expanded coverage on the future of work and emerging HRM issues. Thoroughly revised and updated with the latest research findings, this edition adopts a lateral approach to illustrating the evolving HRM landscape and promoting employability, now available on the MindTap.
social criticism has enjoyed a renaissance in the past few years the anti globalization protests at seattle and genoa and the great marches against the war in iraq have put contestation of capitalism and imperialism back on the political and intellectual agenda but how does social critique situate itself philosophically today after the marginalization of marxism and the impact of postmodernism in the resources of critique alex callinicos seeks to address this question systematically he does so in the first part by surveying some of the most influential contemporary critical theorists alain badiou jacques bidet luc boltanski pierre bourdieu eve chiapello jürgen habermas antonio negri and slavoj Žižek the limitations of all these theorists perspectives prompts callinicos in the second part of the book to outline an alternative approach whose main elements are a critical realist ontology a marxist theory of social contradiction and an egalitarian conception of justice the main thrust of his argument is to show that marx s critique of political economy remains inescapable for anyone seeking to challenge the existing world order but only if it maintains an open but rigorous dialogue with other critical perspectives the resources of critique is above all a contribution to this dialogue

An Introduction to Human Resource Management

an argument that resource scarcity and environmental degradation can provide an impetus for cooperation among countries common wisdom holds that the earth s dwindling natural resources and increasing environmental degradation will inevitably lead to inter state conflict and possibly even set off resource wars many scholars and policymakers have considered the environmental roots of violent conflict and instability but little attention has been paid to the idea that scarcity and degradation may actually play a role in fostering inter state cooperation beyond resource wars fills this gap offering a different perspective on the links between environmental problems and inter state conflict although the contributors do not
deny that resource scarcity and environmental degradation may become sources of contention they argue that these conditions also provide the
impetus for cooperation coordination and negotiation between states the book examines aspects of environmental conflict and cooperation in detail
across a number of natural resources and issues including oil water climate change ocean pollution and biodiversity conservation the contributors
argue that increasing scarcity and degradation generally induce cooperation across states but when conditions worsen and a problem becomes
too costly or a resource becomes too scarce cooperation becomes more difficult similarly low levels of scarcity may discourage cooperation
because problems seem less urgent with contributions from scholars in international relations economics and political science beyond resource
wars offers a comprehensive and robust investigation of the links among scarcity environmental degradation cooperation and conflict

Milton and the Resources of the Line

this broad review of the development of US water resource policy analysis and practice offers perspectives from several disciplines: law, economics, engineering, ecology, and political science. While the historical context provided goes back to the early 19th century, the book concentrates on the past 60 years and features a discussion of the difficulty that has generally been encountered in bringing the disciplines of economics and ecology into collaboration in the water resource context. The book explores the evolution of water-related analytical capabilities and institutions and provides illustrations from case studies, concluding with recommendations for research, institutional change, and action. Though designed to be a background textbook for interdisciplinary graduate seminars in water resources planning and management, it is accessible to interested lay readers and those who have policymaking or implementation responsibility but lack a technical background. The book will appeal to students and faculty in water policy economics and engineering and in interdisciplinary programs organized around water resource problems and questions. Policy makers and general readers will also appreciate this non-technical introduction.

For over eighty years, the Arab region has been deriving massive wealth from its natural resources. Nevertheless, its economic performance has been at the mercy of ebbs and flows of oil prices, and its resources have been slowly depleting. The two critical questions are why and how Arab countries might escape the oil curse. Institutions and macroeconomic policies in resource-rich Arab economies focus on the unique features of the Arab world to explain the disappointing outcomes of macroeconomic policy. It explores the interaction between oil and institutions to draw policy recommendations on how Arab countries can best exploit their oil revenues to avoid the resource curse. Case studies and contributions from experts provide an understanding of macroeconomic institutions, including their underlying rules, procedures, and institutional arrangements in oil-rich Arab economies and of their political economy environment, which has largely been overlooked in previous research. Institutions and macroeconomic policies in resource-rich Arab economies offer novel macroeconomic policy propositions for exchange rate regimes, fiscal policy, and oil wealth distribution that is more consistent with macroeconomic stability and fiscal sustainability. These policy reforms, if implemented successfully, could go a long way in helping the resource-rich countries of the Arab region and elsewhere to avoid the oil curse.

the fishing industry's aggressive and expanding search for fish from the sea reached a turning point in 1990 after many years of increasing production. The global marine and inland catch from natural stocks declined from the 1989 peak of about 89 million tons to 85 million tons in 1993. Aquaculture production did not increase enough to meet the shortfall, and total production also fell in 1990 and 1991. Present indications are that production from natural stocks will be below the current level in the year 2020 at best. It will maintain its present level in the year 2020 at best. This unique new textbook on information systems is provides an answer to a few basic questions in the field. What is the scientific nature of information systems (IS)? How do we design IS in a today's connected world? What is the relationship between IS and innovation in knowledge economies? Whereas mainframe corporate computers tended to dominate the thinking in the 1980s, the dominating factor today is personal digital devices that connect the world as one whole. Network science is emerging to describe these digital connections, e.g., social networking and service science. This book therefore synthesizes the emerging network science and service science with the classic IS theory, resulting in a new set of principles for IS strategic planning. It also reviews the standard topics of system analysis and database design, covering the whole spectrum of databases and all the major methods and techniques of database design. The role of IS as a technological innovation in the knowledge economy is also analyzed. New concepts such as basic values of IS, systems of IS, sustainability of IS, IS as a service system, IS as a human value network, and the hyper-network model for innovation by IS are developed.

This book presents the issues surrounding the conservation of wild species and ecosystems used by people. It is aimed at final year undergraduate and master's students taking courses in conservation, environmental management, ecological economics, and related subjects as well as conservation professionals including managers, policy makers, and researchers. The structure of the book is ideal for a course in conservation comprising a theoretical section written by the authors and a set of ten contributed case studies intentionally diverse in discipline and geographical context.
region and system of study the theoretical section provides the knowledge that is needed to understand the issues while the case studies can form the basis of seminars. Readers will emerge with a clear recognition of the difficulties of limiting the harvesting of biological resources to sustainable levels and of the boundaries of sustainable use as a conservation tool. The authors, an ecologist and an anthropologist, have both worked on the conservation and sustainable use of wildlife for several years including the ivory and rhino horn trades. The first book to examine the issues underlying the sustainable use debate in a fully interdisciplinary manner. Both the theoretical section and the case studies approach the issues using methods from economics, ecology, anthropology, and other fields. Designed as a course textbook combining a theoretical section with invited case studies written by expert practitioners in the field, it outlines the new direction that conservation biology and thus conservation biologists must take if it is to be successful.

This book is intended for use by natural resource managers and scientists and students in the fields of natural resource management, ecology, and conservation biology who are confronted with complex and difficult decision making problems. The book takes readers through the process of developing a structured approach to decision making by firstly deconstructing decisions into component parts which are each fully analyzed and then reassembled to form a working decision model. The book integrates common sense ideas about problem definitions such as the need for decisions to be driven by explicit objectives with sophisticated approaches for modeling decision influence and incorporating feedback from monitoring programs into decision making. Adaptive management is used for illustration along with detailed case studies illustrating the authors' experience in applying structured approaches. There is also a series of detailed technical appendices. An accompanying website provides computer code and data used in the worked examples.
