freedoms and the sovereignty of the member states is omnipresent in the CJEU's case law on direct taxation. A significant number of cases concerned one of the core principles in national tax laws, the principle of territoriality. Although this principle is continuously mentioned in cases concerning the compatibility of direct tax measures with the fundamental freedoms, the case law seems to provoke more questions than answers. This book provides guidance on the meaning of territoriality in the CJEU's case law on direct taxation as well as on the role which this principle plays in the compatibility of domestic direct tax measures with the fundamental freedoms. During a critical and dogmatically oriented journey through the CJEU's case law, the reader can enjoy a comprehensive analysis containing references to more than 300 cases. Without a doubt, this timeless reflection of the tension between the principle of territoriality and the fundamental freedoms is not only interesting from a dogmatic perspective but also from a tax policy one. Everywhere new tax rules are under development to engage with the ever-increasing complexity and sophistication of aggressive tax planning and to reverse the tax base erosion it leads to. The most prominent initiative in this context is the base erosion and profit shifting (BEPS) project of the OECD. Although double non-taxation is among the main issues the BEPS project intends to address, this book shows that this phenomenon has not yet been fully understood. Focusing on the fundamental freedoms and the state aid rules of the EU, this book thoroughly explains the nature of double non-taxation from an EU law perspective, its relation to double taxation, and the impact of EU law on these phenomena. Among the issues dealt with in the course of the analysis are the following: locating the gaps and inconsistencies among domestic tax systems exploited by taxpayers; hybrid mismatch arrangements as a prime example of double non-taxation; political efforts undertaken within the EU in order to address double taxation and double non-taxation; the potential impact of the ECJ's case law on the EU law compatibility of double non-taxation; the tax jurisprudence of the ECJ is referred to and...

This symposium continues the tradition of excellence and the status as the premier technical meeting in this area established by previous meetings. The manuscripts have been divided into eight different topics: industrial processes, economics, technology, demonstration, and commercial activities. Production of hydrogen from methane, methanol, and other sources, production of synthesis Fischer-Tropsch synthesis of hydrocarbons from synthesis gas to catalytic combustion from natural gas to chemicals, light hydrocarbons, and production and conversion. These are the most interesting subjects in the utilization of natural gas with recent scientific innovation and technological advances. industrial wastes to obtain enzymes of economic importance. This book covers research gaps including valorization of fruit and vegetable byproduct—a key contribution to sustainability that makes the utmost use of agricultural produce while employing low energy and cost-efficient bioprocesses. Written by experts in the field of enzyme technology, the book provides valuable information for academic researchers, graduate students, and industry scientists working in industrial food microbiology, biotechnology, bioprocess technology, post-harvest technology, agriculture waste management, and the food industry. It addresses key opportunities and challenges in the emerging field of enzyme technology with an emphasis on energy and bio-based industrial applications. The book explores the current state of the art bioprocesses in enzyme production using fruit and vegetable wastes with respect to their generation. Current methods of disposal and problems faced in terms of waste and regulation are presented. Information on bioprospecting of fruit and vegetable to obtain enzymes of economic importance is delved into, along with environmental concerns and economic considerations related to fruit and vegetable processing by-products. The book summarizes the latest advances in experimental impact mechanics, providing cutting-edge techniques and methods for designing, executing, analyzing, and interpreting the results of experiments involving the dynamic responses of materials and structures. It offers tailored guidelines and solutions for specific applications and materials, covering topics such as dynamic characterization of metallic materials, fiber-like materials, low impedance materials, concrete, and more. Damage evolution and constitutive behavior of materials under impact loading, one-dimensional strain loading, intermediate and high strain rates, and other environmental conditions are discussed. Techniques using high temperature testing and miniature Kolsky bars are also covered. The handbook on state aid in the banking sector brings together experts in
state aid and in financial regulation drawn from legal academia legal practice economics and from the eu and eea institutions to shed light on this relationship the editors and expert contributors do this by elucidating key concepts that underpin the application of state aid law to banks and by considering specific aspects of the interface between state aid and financial regulation the handbook s analysis is complemented by a number of key country based case studies and by a concluding section which takes stock of the banking union s package of legislative regulatory reforms and reflects on the possible future role of state aid in this sector orphan crops play an important role in food and nutrition security especially in growing economies where small holder farmers produce the majority of food despite their importance in global agriculture and their often remarkable nutrient content and adaptation to challenging environmental conditions orphan crops have received limited attention by the scientific community and industry however the diversity of neglected plant species provides a large genetic resource that could significantly contribute to broadening the biodiversity of trait desired crops for novel value chains sustainable development and food security the uptake of new plant breeding techniques notably genome editing as well as omic tools are now accelerating translation of basic research and facilitating the exploration of orphan crops these advancements also give rise to public and politic engagement discussions to maximize socio economic impact given that the greatest need for food and nutritional security is in growing economies issues of food sovereignty and sustainability of their food systems become front and centre there is now an exceptional opportunity to tackle some of the major current challenges in agriculture including climate change sustainable cropping systems food quality and nutritional security through broadening research in wild relatives of crops and on orphan species this research topic seeks to showcase research on neglected plants using advanced molecular technologies e.g. genome sequencing omics etc and new plant breeding approaches methods and tools this research topic will also discuss the challenges and opportunities arising when modern breeding techniques are applied for translational research sustainable engineering for life tomorrow examines the future of

the most important and recent judgments of the CJEU considering the ever increasing importance of indirect taxation as a source of revenue for governments, the intensifying complexity of the legal framework, and the proliferating number of countries adopting indirect taxation, it is essential to scrutinize how the law is applied in practice. The primary driving force in this area is undoubtedly the Court of Justice of the European Union. This book analyzes selected topics, e.g., fundamental principles and VAT, VAT treatment of financial services, taxable base and rates, exemptions, and deductions, by examining the most prominent and recent judgments of the Court of Justice of the European Union. Experts from all over the world, not just from academia but also government and judiciary representatives, as well as tax practitioners, have provided their input and helped us compile what is an informative and worthy read for anyone dealing with indirect taxation on a professional basis.

**Engaging with the Past, c.250-c.650**

between c 250 and c 650 the way the past was seen recorded and interpreted for a contemporary audience changed fundamentally. Only since the 1970s have the key elements of this historiographical revolution become clear with the recasting of the period across both east and west as late antiquity. Historiography, however, has struggled to find its place in this new scholarly world. No longer is decline and fall the natural explanatory model for cultural and literary developments, but continuity and transformation in addition. The emergence of late antiquity coincided with a methodological challenge arising from the linguistic turn, which impacted on history writing in all eras. This book is focused on the development of modern understanding of how the ways of seeing and recording the past changed in the course of adjusting to emerging
social religious and cultural developments over the period from c 250 to c 650 its overriding theme is how modern historiography has adapted over the past half century to engaging with the past between c 250 and c 650 now as explained in this book the newly dominant historiographical genres chronicles epitomes church histories are seen as the preferred modes of telling the story of the past rather than being considered rudimentary and naïve

**Particle Therapy Technology for Safe Treatment**

2022-01-18

The path from clinical requirements to technical implementation is filtered by the translation of the modality to the technology. An important part of that filter is that the modality be safe for that to be the case, it is imperative to understand what clinical parameters affect the safety of a treatment and then determine how the technology can affect those parameters. This book provides a practical introduction to particle therapy. It provides a thorough introduction to the technological tools and their applications and then details the components that are needed to implement them. It explains the foundations of beam production and beam delivery that serve to meet the necessary clinical requirements. It emphasizes the relationship between requirements and implementation including how safety and quality are considered and implemented in the solution. The reader will learn to better understand what parameters are important to achieve these goals. Particle therapy technology for safe treatment will be a useful resource for professionals in the field of particle therapy in addition to biomedical engineers and practitioners in the field of beam physics. It can also be used as a textbook for graduate medical physics and beam physics courses. Key features present a practical and accessible journey from application requirements to
