active managers persistently lag the returns of benchmarks and index funds that track them with
the excuses for underperformance recycled every year. This comprehensive book is the antidote for the active managers' siren song. If you understand the benefits of indexing or systematic investing, it will reinforce your commitment while increasing your knowledge. If you don't yet believe, Swedroe and Berkin provide a compelling case that you're playing the loser's game of active management: alpha or outperformance against appropriate risk-adjusted benchmarks is shrinking as it gets converted into beta or factor exposures. They demonstrate that even for the most talented managers, their ability to add value is waning because the amount of alpha available is declining—it must be split among an increasing amount of investment dollars and the competition is getting tougher. In this greatly expanded second edition, Swedroe and Berkin show you how to develop an investment plan that focuses on what risks to take and how much of them as well as how to build a diversified portfolio. They present a list of vehicles to consider when implementing your plan and provide guidance on the care and maintenance of your portfolio. As a bonus, they add appendices that will make you a more informed and therefore better investor. This makes the incredible shrinking alpha a complete guide to successful investment strategy.
