alternative ways of thinking analysing and performing economic geographies have become increasingly significant in recent years partly due to the recent financial crisis which has had social and political consequences throughout the world yet there is a danger that the debate about alternatives may become simply a way of fixing global capitalism in its present crisis ridden form instead the analysis of alternative economic spaces must continue to offer a critique of the very notion of capitalism as a universal if variable set of social relations this important book brings together critical analyses of alterity from across the social sciences and humanities refining and advancing what alternative economies and polities are how they are formed what difficulties and problems they face and how they might be sustained a central theme is the need to examine critically both the material contexts and the conceptual categories deployed in the making of alternative economies

uncovers what the sociology of religion would look like had it emerged in a confucian muslim or native american culture rather than in a christian one sociology has long used western christianity as a model for all religious life as a result the field has tended to highlight aspects of religion that christians find important such as religious beliefs and formal organizations while paying less attention to other elements rather than simply criticizing such limitations james v spickard imagines what the sociology of religion would look like had it arisen in three non western societies what aspects of religion would scholars see more clearly if they had been raised in confucian china what could they learn about religion from ibn khalidun the famed 14th century arab scholar what would they better understand had they been born navajo whose traditional religion certainly does not revolve around beliefs and organizations through these thought experiments spickard shows how non western ideas understand some aspects of religions even of western religions better than does standard sociology the volume shows how non western frameworks can shed new light on several different dimensions of religious life including the question of who maintains religious communities the relationships between religion and ethnicity as sources of social ties and the role of embodied experience in religious rituals these approaches reveal central aspects of contemporary religions that the dominant way of doing sociology fails to notice each approach also provides investigators with new theoretical resources to guide them deeper into their subjects the volume makes a compelling case for adopting a global perspective in the social sciences

Alternatives to Convergence? 2014-09-18

The U.S. military has a stockpile of approximately 400,000 tons of excess obsolete or unserviceable munitions. About 60,000 tons are added to the stockpile each year. Munitions include projectiles, bombs, rockets, landmines, and missiles. Open burning and open detonation (OB/OD) of these munitions has been a common disposal practice for decades. Although it has decreased significantly since 2011, OB/OD is relatively quick procedurally, straightforward, and inexpensive. However, the downside of OB/OD is that they release contaminants from the operation directly into the environment over time. A number of technology alternatives to OB/OD have become available, and more are in research and development. Alternative technologies generally involve some type of contained destruction of the energetic materials, including contained burning or contained detonation. As well as contained methods that forego combustion or detonation, alternatives for the demilitarization of conventional munitions reviews the current conventional munitions demilitarization stockpile and analyzes existing and emerging disposal treatment and reuse technologies. This report identifies and evaluates any barriers to full-scale deployment of alternatives to OB/OD or non-closed-loop incineration combustion and provides recommendations to overcome such barriers.

Giving on occasions a talk on the subject of this book, one of the queries raised was surely what you mean are flat hierarchies. This I think gives an indication of how difficult it can be to conceive of organizations which do not have a hierarchical structure. A rather similar response was obtained when in the 1950s an account was given to a manager of the British Coal Board of an autonomous composite team of more than 40 miners who had taken over complete responsibility for a three-shift cycle and divided the income obtained among themselves. His comment was that this could...
not possibly work the new mode of work organization which had been evolved by the miners in several pits in the durham coal fields was at the
time well ahead of the prevailing concepts and philosophy of both management and the trade union it did not help matters very much that the
detailed accounts were presented in an academic and scientific form trist et ai 1963 herbst 1962 i think that we felt that all the backing of
systematic research and data analysis would be needed to present the case for modes of organization which deviated from conventional practice
however something was learned from this experience when at the beginning of the 1960 s the norwegian work democratization project was started
a number of demonstration sites were set up which people could look at and which could function as centers for diffusion

Alternatives to Multilateralism 2020-08-25
Despite the great recession, slightly different forms of global capitalism are still portrayed as the only game in town by the vast majority of people in power in the world today. Unbridled growth, trade liberalisation, and competition are advocated as the only or best ways of organizing the contemporary world. Unemployment, yawning gaps between rich and poor, political disengagement, and environmental devastation are too often seen as acceptable side effects of the dominance of neoliberalism, but the reality is that capitalism has always been contested and that people have created many other ways of providing for themselves. This book explores economic and organizational possibilities which extend far beyond the narrow imagination of economists and management theorists. Chapters on co-operatives, community currencies, the transition movement, scrounging, co-housing, and much more paints a rich picture of the ways in which another word is not only possible but already taking shape. The aim of this companion is to move beyond complaining about the present and into exploring this diversity of organizational possibilities. Our starting point is a critical analysis of contemporary global capitalism: it is merely the opening for thinking about organizing as a form of politics by other means and one that can be driven by the values of solidarity, freedom, and responsibility. This comprehensive companion, with an international cast of contributors, gives voice to forms of organizing which remain underrepresented or marginalised in organizational studies and conventional politics, yet which offer more promising grounds for social and environmental justice. It is a valuable resource for students, activists, and researchers interested in alternative approaches to economy and society in a variety of disciplinary and interdisciplinary fields.

Migrant experiences accentuate general aspects of the human condition. Therefore, this volume explores migrant's movements not only as geographical movements from here to there but also as movements that constitute an embodied, cognitive, and existential experience of living in between or on the borderlands between differently figured life worlds. Focusing on memories, nostalgia, the here and now, social experiences of daily living, and the hopes and dreams for the future, the volume demonstrates how all interact in migrants and refugees' experience of identity and quest for well-being.
