Exploring the role of accreditation in enhancing quality and innovation in health professions education proceedings (PDF)

The purpose of accreditation is to build a competent health workforce by ensuring the quality of training taking place within those institutions that have met certain criteria. It is the combination of institution or program accreditation with individual licensees for confirming practitioner competence that governments and professions use to reassure the public of the capability of its health workforce. Accreditation offers educational quality assurance to students, governments, ministries, and society given the rapid changes in society, health, and health care. The national academies of sciences, engineering, and medicine hosted a workshop in April 2016 aimed to explore global shifts in society, health, care, and education and their potential effects on general principles of program accreditation across the continuum of health professional education. Participants explored the effect of societal shifts on new and evolving health professional learning opportunities to best ensure quality education is offered by institutions regardless of the program or delivery platform. This publication summarizes the presentations and discussions from the workshop historically. Accreditation in higher education developed as a part of the evolution of the American higher education system at a time when it was becoming problematic that no single point of control or central body existed to set educational standards. In the late 19th century, there was no consensus on the content of educational programs offered. Postsecondary educational institutions or the distinctions between educational offerings at secondary and postsecondary institutions because the boundaries were unclear. The first voluntary association of postsecondary institutions was formed in 1895 to define the difference between high school and college and to develop some guidelines and procedures for peer review as a condition for membership. Over time, a number of regional associations formed whose membership was contingent on accreditation. The associations established separate accrediting bodies or commissions that were responsible for developing standards and passing on the institutional qualifications for membership by the early 1970s. All but a small percentage of degree-granting institutions were either accredited or applicants for accreditation. The United States does not have a centralized authority. Accreditation in higher education is a matter of the states assume varying degrees of control over education, but in general, institutions of higher education in the United States are permitted to operate with considerable independence and autonomy. Consequently, the character and quality of these programs can vary widely across the wide array of programs and institutions in higher education. This book discusses the background issues and considerations of accreditation of higher education accreditation of our nation’s institutions of higher education has undergone dramatic changes in the past decade. Harland G. Bloland was an insider during the establishment of a new organization. The council for higher education accreditation (CHEA) this book chronicles his unique experiences with the players, processes, and history involved in creating CHEA. Bloland’s creation of a biennial report on the history of higher education accreditation chronicles his rare insider experiences with the players, processes, and history involved in creating the council for higher education accreditation. CHEA was present at the meetings of the national policy board and the presidents work group as they set the parameters for the creation of CHEA. The crucial entity that recognizes accrediting agencies for colleges and universities across the United States reviews the past accrediting oversight of FAHE, NCA, COBA, and COPA. The first voluntary association was formed in 1895. To define the difference between high school and college and to develop some guidelines and procedures for peer review as a condition for membership. Over time, a number of regional associations formed whose membership was contingent on accreditation. The associations established separate accrediting bodies or commissions that were responsible for developing standards and passing on the institutional qualifications for membership. Bloland’s research concerning the obstacles and possibilities confronted by a new organization helps to characterize CHEA and previous accrediting organizations and to answer the following questions: what is accreditation and why is it important? What is the social and political context within which CHEA was developed? What occurred in the process of creating CHEA? What roles do accreditation and CHEA play in American higher education? What were the issues that CHEA and accreditation faced in its infancy? What is the current state of CHEA and accreditation intended as a forum for the discussion of postsecondary accreditation, this book addresses pragmatic issues such as the areas of transfer articulation and general education. The following 10 chapters are included: 1. Regional accreditation and two-year colleges by Robert S. Palinchak. 2. Accreditation and two-year branch campuses by Corrinne A. Caldwell and Lawrence S. **The Role of Accreditation in a Quality Assurance Framework 2010**

Since the establishment of state land grant universities, our country has rightly recognized higher education as an essential public good in the national interest as reported in Chapter 1, but states have also played a critical role in an affordable college education through investing and being a key player in oversight and developing strategies to increase degree attainment. Chapter 2 examines 1 the strengths and challenges of the current U.S. accreditation system in overseeing the academic quality of schools, and 2 potential approaches for improving the U.S. accreditation systems oversight of academic quality as reported in Chapter 3. Institutions across the country are providing their students new opportunities to earn a degree as a result, we are seeing more diversity on campuses, and the idea of a traditional student has been turned on its head. Today's students come from a wide range of backgrounds, they are at various stages in their lives and careers, and they have new unique and changing needs.

A behind the scenes look at how college and university accreditation affects your education and the value of your degree accreditation is essential to colleges and universities; without it, they are unable to participate in federal student aid programs or confer legitimate degrees in accreditation on the edge. Susan D Phillips and Kevin Kinser bring together the expertise of different stakeholders to illustrate the complexities of the accreditation system and to map the critical issues that must be navigated. Going forward, accreditation can be seen both as an invaluable resource and as a barrier to needed reform. The book offers nuanced views on accreditation's importance to higher education and on the potential impact of proposed reforms. The contributors reveal that accreditation is currently on the edge of a policy precipice as the needs of higher education and the interests of the many stakeholders may well outstrip its ability to perform but they argue accreditation is also on the cutting edge of the transformation of higher education in the twenty-first century. Intended for policymakers, accreditors, institutional leaders, and scholars in higher education, accreditation on the edge offers a comprehensive analysis of the critical issues that accreditation reform needs to address if it is to serve the future of a fast-changing higher education environment.

**Organizational Structure of Nongovernmental Postsecondary Accreditation 1973**

Is the accreditation system broken as claimed by successive secretaries of education and some recent reports? This book addresses this question head on: asking whether accreditation is indeed in need of radical reform and whether the agencies' authority should be curtailed or whether in fact the changes now underway that accrediting agencies contend ensure rigorous and consistent standards and degrees that are a reliable gauge of student attainment are moving the academy and the nation in the right direction. In a sweeping and ambitious book Paul Gaston deploys his knowledge and experience as a peer reviewer for three regional accrediting agencies, a former board member and chair of the association of specialized and professional accreditors, and his involvement in the early stages of the council for higher education accreditation to go beyond the polemics to explore whether a strategy that builds on the emerging values and good practices can achieve the substantive and positive improvements the public is demanding as an introduction for readers new to the debate, he provides a brief overview of the development of accreditation, its terminology and structure describing how it currently works and what it has achieved and offers insight into the proliferation of the missions of accreditation as well as the multiplicity of stakeholders with an interest in its outcomes. Question whether the mandate of accreditation should as some contend be expanded or particular missions reassigned or abandoned this established he undertakes a dispassionate analysis of the arguments and recommendations of critics and supporters of the current direction.
