food process engineering focuses on the design, operation, and maintenance of chemical and other process manufacturing activities. The development of agro-processing will spur agricultural diversification. There are several benefits of promoting small-scale agro-processing units rather than large-scale for the promotion of rural entrepreneurship. Appropriate post-harvest management and value addition to agricultural products in their production catchments will lead to employment and income generation in the rural sector and minimize the losses of harvested biomass. Adoption of suitable technology plays a vital role in fixing the cost of the final product and consequently makes the venture profitable. It is observed that imported agro-processing machines or their imitations are used for preparing food products. Actually, the working of these machines should be critically studied in the context of energy input and the quality of the finished product.
biosensors in food safety and quality have become indispensable in today's world due to the requirement of food safety and security for human health and nutrition. This book covers various types of sensors and biosensors that can be used for food safety and food quality monitoring, but these are not limited to conventional sensors such as temperature sensors, optical sensors, electrochemical sensors, calorimetric sensors, and pH sensors. The chapters are framed in a way that readers can experience the novel fabrication procedures of some advanced sensors including lab on a chip biosensors, IoT-based sensors, microcontroller-based sensors, and so on particularly for fruits and vegetables, fermented products, plantation products, dairy-based products, heavy metal analysis in water, meat, fish, etc. Its simplistic presentation and pedagogical writing provide the necessary thrust and adequate information for beginners, scientists, and researchers. The book offers comprehensive coverage of the most essential topics which include the following fundamentals of biosensors: overview of food safety and quality analysis, major toxicants of food and water, fabrication techniques of biosensors applicable for different segments of the food industry. This book serves as a reference for scientific investigators who work on the assurance of food safety and security using biosensing principles as well as researchers developing biosensors for food analysis. It may also be used as a textbook for graduate level courses in bioelectronics.

bridging two peoples tells the story of Dr. Peter E. Jones who in 1866 became one of the first status Indians to obtain a medical doctor degree from a Canadian university. He returned to his southern Ontario reserve and was elected chief and band doctor as secretary to the Grand Indian Council of Ontario. He became a bridge between peoples conveying the chiefs' concerns to his political mentor, Prime Minister Sir John A. Macdonald. Most importantly during consultations on the Indian Act, the third son of a Mississauga Ojibwe missionary and his English wife, Peter E. Jones overcame paralytic polio to lead his people forward. He supported the granting of voting rights to Indians and edited Canada's first Native newspaper to encourage them to vote. He appointed a federal Indian agent—a post usually reserved for non-natives to promote education and introduced modern public health measures on his reserve. But there was little he could do to stem the ravages of tuberculosis that cemetery records show claimed upwards of 40 per cent of the band. The Jones family included Native and non-native members who treated each other equally. Jones's Mississauga grandmother is now honored for helping survey the province of Ontario. His mother published books, and his wife was an early feminist. The appendix describes how aboriginal grandmothers used herbal medicines and crafted surgical appliances from birchbark.

drawing on work with Indian and Japanese patients, a prominent American psychoanalyst explores inner worlds that are markedly different from the Western psyche. A series of fascinating case studies illustrates Alan Roland's argument that the familial self rooted in the subtle emotional hierarchical relationships of the family and group predominates in Indian and Japanese psyches and contrasts strongly with the Western individualized self in perceptive and sympathetic terms. Roland describes the emotional problems that occur when Indians and Japanese encounter Western culture and the resulting successful integration of new patterns that he calls the expanding self. As we were coming in for a landing to Bombay, he writes, the plane banked so sharply that when I supposedly looked down all I could see were the stars while if I looked up there were the lights of the city. This is the world turned upside down that he describes so eloquently in this book. What he has learned will fascinate those who wish to deepen their understanding of a different way of being.
