**International Secured Transactions** 2003: This volume contains the reports and discussions presented at the conference the future of secured credit in Europe in Munich from July 12th to July 14th 2007. It aims at taking the debate to a new stage by exploring the need and possible avenues for creating a European law of security interests. The first part examines from an economic and a community law perspective the case for European lawmaking on secured credit and the legislative approach to be taken. The intention in the second and third part is to look in more detail at the choices European lawmakers will have to make in devising a European law of secured credit. The second part focuses on secured transactions involving corporeal movables, tangibles, whereas the third part considers categories of collateral that may require special rules.

The law of secured transactions has seen dramatic changes in the last decade. International organisations, particularly the United Nations Commission on International Trade Law (UNCITRAL), have been working towards the creation of international legal standards aimed at the modernisation and harmonisation of secured financing laws. Examples include the United Nations Convention on the Assignment of Receivables in International Trade, the UNCITRAL Legislative Guide on Secured Transactions, and its Intellectual Property supplement. The UNCITRAL Guide on the Implementation of a Security Rights Registry and the UNCITRAL Model Law on Secured Transactions have also been influential.

The overall theme of this book is international or cross-border secured transactions law. It assembles contributions from some of the most authoritative academic voices on secured financing law. This publication will be of interest to those involved in secured transactions around the world, including policymakers, practitioners, judges, arbitrators, and academics.

Guide to Secured Lending Transactions (1988) focuses on international harmonisation and the law of secured transactions by distilling and analysing the unifying principles of various significant international conventions and instruments, such as the United Nations Convention on the Assignment of Receivables, the UNIDROIT Convention on International Factoring, the EBRD Model Law on Secured Transactions, the UNIDROIT Convention on the International Interests in Mobile Equipment, and the UNCITRAL Legislative Guide on Secured Transactions. International secured transactions conventions and instruments facilitate credit and promote economic activity through the creation of harmonised rules. Given the increasing globalisation of markets, international reform efforts for the harmonised modernisation of secured transactions law have gained pace over recent years. International secured transactions law draws on experiences in both English and US laws in order to
identify and illustrate the existing problems that need to be addressed as well as identify potential solutions international secured transactions law will be of interest to scholars students interested in international commercial law corporate law or comparative secured transactions and practitioners involved in international commercial transactions
