On-Orbit Operations Optimization 2014-06-13

On-orbit operations optimization among multiple cooperative or noncooperative spacecraft which is often challenged by tight constraints and shifting parameters has grown to be a hot issue in recent years. The authors of this book summarize related optimization problems into four planning categories: spacecraft multi-mission planning, far range orbital maneuver planning, proximity relative motion planning, and multi-spacecraft coordinated planning. The authors then formulate models, introduce optimization methods, and investigate simulation cases that address problems in these four categories. This text will serve as a quick reference for engineers, graduates, and postgraduates in the fields of optimization research and on-orbit operation mission planning.

Model Uncertainties in Foundation Design 2021-03-16

Model uncertainties in foundation design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types, shallow foundations, spudcans, driven piles, drilled shafts, rock sockets, and helical piles, and a wide range of ground conditions from soil to soft rock. All databases with names prefixed by 'nus' are available upon request. This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation (cov) for ultimate and serviceability limit state based on these databases. These statistics can be used directly for AASHTO LRFD calibration. Besides load test databases, performance databases for other geostructures and their model factor statistics are provided based on this extensive literature survey. A practical three-tier scheme for classifying the model uncertainty of geostructures according to the model factor mean and cov is proposed. This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian highway bridge design code and being considered for the new draft for Eurocode 7 Part 1 En 1997 1 202x. The helical pile research in Chapter 7 was recognized by the 2020 ASCE Norman Medal.

The Routledge Handbook of Accounting Information Systems 2022-11-25

The Routledge Handbook of Accounting Information Systems is a prestige reference work offering a comprehensive overview of the state of current knowledge and emerging scholarship in the discipline of AIS. The pace of technological-driven change is rapid and this revised edition provides a deeper focus on the technical underpinnings and organizational consequences of accounting information systems. It has been updated to capture the changes in technology since the previous edition. It now includes chapters and scholarly thought on artificial intelligence, predictive analytics, and data visualisation. Among others, contributions from an international cast of authors provide a balanced overview of established and developing themes identifying issues and discussing relevant debates. The chapters are analytical and engaging. Many chapters include cases or examples and some provide additional resources for readers. The chapters also provide a reflection on where the research agenda is likely to advance in the future. This is a complete and indispensable guide for students and researchers in accounting and accounting information systems. Academics and students seeking convenient access to an unfamiliar area as well as established researchers seeking a single repository on the current debates and literature in the field.
