Annotation in the western world the prevalence of allergy and asthma has increased two to threefold over the last 40 years and has reached epidemic proportions. This book represents the first complete document containing recommendations on the prevention of allergy and allergic asthma based on the current understanding of the immunological mechanisms of allergic reactions. Prevention of allergy and allergic asthma was a collaborative project between the WAO World Allergy Organization and the WHO launched in 1999 following two interim reports. This monograph is the final report of the group of international experts involved in the project ranging from basic immunologists to clinicians both theoretical and practical aspects are discussed and constructive advice is given through its network of more than 70 member societies. The WAO will now promote the concept of prevention of allergies and allergic asthma worldwide to benefit patients prone to become allergic to prevent the worsening of existing allergic diseases and to reduce their high cost to society. This publication is recommended to specialists in allergy, pediatrics, pneumology, and dermatology as well as to general practitioners, health care professionals, journalists, politicians, and patients. Only by increasing the knowledge about allergic diseases throughout society can the right steps be taken for their effective prevention. The most common problems afflicting people in the modern world are asthma and allergies, even children are not spared from these. How to control asthma and allergy offers an insight into the basic causes and types of asthma and allergies and how they can be best dealt with the book provides multiple treatment options to choose from: allopathy, acupuncture, magnetotherapy, Ayurveda, homoeopathy, and nature cure written in a simple and lucid style. prevalence of exercise induced asthma (EIA) has increased over the last two decades, especially amongst elite endurance athletes. It has been reported that high level endurance training, in particular, may increase bronchial hyperresponsiveness (BHR) and cause inflammation in the airways. Intensive endurance training and competition, together with environmental influences, are thought to be causative factors for winter sports. Inhaled cold air represents such an environmental factor. Moreover, exposure to allergens and allergen immunotherapy may also cause inflammation in the airways. New strategies in allergy and immunotherapy, such as allergy and causative allergens and provides diagnostic and therapeutic aspects, are covered in the book. The book features a special section on allergic diseases and allergens from tropical countries, including such countries as India, Sri Lanka, Iran, and South Korea, giving the book a global appeal. The book is broken into sections on epidemiology, pathophysiology, and diagnosis of allergy, aerobiology, and allergic diseases. It covers pollen allergy in the tropics and temperate regions, allergy in children, food allergy, evaluation, allergen immunotherapy, and anti-ige.
