uncovers the origins of the first paragraph or chapter divisions in copies of the christian scriptures its focal point is the magnificent fourth century codex vaticanus vat gr 1209 b 03 perhaps the single most significant ancient manuscript of the bible and the oldest material witness to what may be the earliest set of numbered chapter divisions of the bible the first chapters tells the history of textual division starting from when copies of greek literary works used virtually no spaces marks or other graphic techniques to assist the reader it explores the origins of other numbering systems like the better known eusebian canons but its theme is the first set of numbered chapters in codex vaticanus what nineteenth century textual critic samuel p tregelles labelled the capitulatio vaticana it demonstrates that these numbers were not as most have claimed late additions to the codex but belonged integrally to its original production the first chapters then breaks new ground by showing that the capitulatio vaticana has real precursors in some much earlier manuscripts it thus casts light on a long continuous tradition of scribally placed visual guides to the reading and interpreting of scriptural books finally the first chapters exposes abundant new evidence that this early system for marking the sense divisions of scripture has played a much greater role in the history of exegesis than has previously been imaginable lust and her outstanding contributors have fully revised the text to take into account the watershed events that have taken place in the middle east since the first chapters uncovers the origins of the first paragraph or chapter divisions in copies of the christian scriptures its focal point is the magnificent fourth century codex vaticanus vat gr 1209 b 03 perhaps the single most significant ancient manuscript of the bible and the oldest material witness to what may be the earliest set of numbered chapter divisions of the bible the first chapters tells the history of textual division starting from when copies of greek literary works used virtually no spaces marks or other graphic techniques to assist the reader it explores the origins of other numbering systems like the better known eusebian canons but its theme is the first set of numbered chapters in codex vaticanus what nineteenth century textual critic samuel p tregelles labelled the capitulatio vaticana it demonstrates that these numbers were not as most have claimed late additions to the codex but belonged integrally to its original production the first chapters then breaks new ground by showing that the capitulatio vaticana has real precursors in some much earlier manuscripts it thus casts light on a long continuous tradition of scribally placed visual guides to the reading and interpreting of scriptural books finally the first chapters exposes abundant new evidence that this early system for marking the sense divisions of scripture has played a much greater role in the history of exegesis than has previously been imaginable

in the beginning of this new century when able people in science across the world are working on scientific methods of providing sustainable development specific to their own countries or general to the world it is also timely to remind ourselves that technology may not be the answer to everything technology by itself produces only summary statements on how physical entities in the world are related it does not provide methods of how human inputs are to be used in combining the technology in generating outputs it also does not address issues on how the outputs of the combination of technology and human resources ought to be valued lastly it does not address in which existing technologies can be combined further modified and the institutional environment for continuous experiments and improvements this book brings together a collection of essays attempting to capture these interactions for the purpose of promoting sustainable development by theoretical discussions and by case studies the essays describe how environmental concerns can be or have been addressed to in the process of development in different institutional settings the knowledge coming out of this research suggested a proposition loud and clear to researchers now working on the concept of sustainable development the authors describe how the concept of sustainable development can be implemented the quest for sustainable development is not the monopoly of secular or positivist inquiry the authors offer insights into the material means and framework by which sustainability as a normative concept can be rendered operational for those who accept voluntary transactions as the basis of social interactions
