In present day sociolinguistics, it often needs to be supplemented by hermeneutic biographical analyses of the individual speakers' lives when applied to historical data. With this background, common theories and models of language change such as grammaticalization, paradigmatic pressure, typological alignment, and generational shifts are illustrated and evaluated from the point of view of single speakers and social groups, and their particular embedding in the speech community through various network structures. The book is of interest to advanced students and researchers in English and General Linguistics, Middle English, Historical Linguistics, and Language Change. Switching and routing are two types of procedures having the same fundamental purpose which is transferring information between different users of communication networks. But while routing must be viewed at the overall level of the communication network, the information being exchanged between network nodes, switching refers to operations involving a single communication node. The information being transferred between its input/output access ports should also be noted that the routing is executed according to a routing protocol used on the network while the switching is based on elements belonging to a single node in the network. Namely, its switching structure, routing table, and path selection algorithm between ports.
