A successful vaccine for the prevention and or immunotherapy against HIV AIDS is one of the prominent challenges of the 21st century. To date, all human vaccine trials against this virus disease have resulted in failure or at best have shown very low efficacy. The scientific community dealing with HIV AIDS has unanimously proposed a focus on basic science with the intention of identifying correlates of protection that can serve as guides in developing and evaluating vaccine preparation. However, nature seems to have already found several ways of dealing with infections by HIV and related primate lentiviruses either by resisting infection or once infected avoiding immune damage and immunodeficiency. Models of protection against HIV SIV will allow for an in-depth reflection on the perspectives for vaccine and therapy research derived from important recent studies. This book is structured in a unique way, looking at three models of resistance protection separately and then comparing the models against one another to provide its readership with a detailed examination of the research that is most predominant in the search for a vaccine. This structure presents the information in an easy to understand format and gives the book a cross-discipline appeal. An important reference for those in the scientific community, medical care, public health, and academia alike, it provides extensive descriptions and comparisons on the different models of protection against HIV AIDS. Comprehensive writing and illustrations contribute to the book's appeal. The contributors are among the most eminent specialists in the field of HIV resistance protection, including F. Barre-Sinoussi, 2008 Nobel Prize for Medicine winner; B. Walker; S. Rowland Jones; A. Telenti; M. Lederman; and F. Plummer. Minor Cooper Keith was an American who pursued personal wealth and helped to develop small-country wealth. He made a fortune in Costa Rica, built its railroads, was chief collector of its archaeological treasures, and was a founder of the United Fruit Company. He introduced the banana as a staple on the world market in 1871. After graduation from Brooklyn High School and a successful year herding his own cattle on an island off Texas, he went to work for his brother in Costa Rica. He died on his family estate on Long Island in 1929. The greatest drama in his life was the building of the railroad, the greatest too in the economic life of that central American Republic. The bridge over the Birris, a fine structure for its day, was 300 feet at its highest point above the river, 600 feet long. The difficult final link was crossed in 1890 on the initial run. The engineer approaching the bridge fearing it would collapse refused to continue. Keith, seizing the American flag mounted the cowcatcher when the intrepid contractor showed such courage where was the engineer who would hesitate further? The bridge was crossed, the line twenty years abuilding became a reality back of the palace. In these essays, critics, film makers, and musicians examine the state of pop cinema past present and future. The book includes interviews with Quentin Tarantino, David Byrne, Penelope Spheeris, Ry Cooder, and Wim Wenders.
