the public outcry for a return to moral education in our schools has raised more dust than it s dispelled building upon his provocative ideas in on becoming responsible michael pritchard clears the air with a sensible plan for promoting our children s moral education through the teaching of reasonableness pritchard contends that children have a definite but frequently untapped capacity for reasonableness and that schools in a democratic society must make the nurturing of that capacity one of their primary aims as fundamental to learning as the development of reading writing and math skills reasonableness itself he shows can be best cultivated through the practice of philosophical inquiry within a classroom community in such an environment children learn to work together to listen to one another to build on one another s ideas to probe assumptions and different perspectives and ultimately to think for themselves advocating approaches to moral education that avoid mindless indoctrination and timid relativism pritchard neither preaches nor hides behind abstractions he makes liberal use of actual classroom dialogues to illustrate children s remarkable capacity to engage in reasonable conversation about moral concepts involving fairness cheating loyalty truthtelling lying making and keeping promises obedience character and responsibility he also links such discussions to fundamental concerns over law and moral authority the
roles of teachers and parents and the relationship between church and state pritchard draws broadly and deeply from the fields of philosophy and psychology as well as from his own extensive personal experience working with children and teachers the result is a rich and insightful work that provides real hope for the future of our children and their moral education

Biological diversity the variety of living organisms on earth is traditionally viewed as the diversity of taxa and species in particular however other facets of diversity also need to be considered for a comprehensive understanding of evolutionary and ecological processes this novel book demonstrates the advantages of adopting a functional approach to diversity in order to improve our understanding of the functioning of ecological systems and their components the focus is on plants which are major components of these systems and for which the functional approach has led to major scientific advances over the last 20 years plant functional diversity presents the rationale for a trait based approach to functional diversity
in the context of comparative plant ecology and agroecology it demonstrates how this approach can be used to address a number of highly debated questions in plant ecology pertaining to plant responses to their environment controls on plant community structure ecosystem properties and the services these deliver to human societies this research level text will be of particular relevance and use to graduate students and professional researchers in plant ecology agricultural sciences and conservation biology

In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty (CTBT) prohibiting nuclear explosions worldwide in all environments. The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe, a data communications network, an international data centre (IDC), and on-site inspections to verify compliance. A global hydroacoustic monitoring system is being planned and implemented for verification of the CTBT. Much of the research conducted over the past several decades on acoustic surveillance of the oceans formerly driven by the need to detect and track submarines is now being applied to the development of effective monitoring methods to verify compliance with the CTBT. The aim of this volume on hydroacoustic monitoring of the CTBT is to summarize the research being conducted in this field and to provide basic references for future research. Much of the new research emphasizes major advances in understanding the coupling of ocean acoustic waves with elastic waves in the solid earth. Topics covered include source excitation detection and classification of events generating hydroacoustic signals, discrimination between underwater explosions and naturally occurring events, as well as topics in coupling of acoustic to seismic wavefields.
