international law essentially refers to the process of assigning meaning to texts and other statements for the purposes of establishing rights obligations and other consequences relevant in a legal context. Interpretation is both a cognitive and a creative process. International law is a set of rules and principles that govern the conduct of states, international organizations, and individuals in their interactions on a global scale. It is a multifaceted legal system designed to regulate relations between sovereign states and ensure stability, order, and justice in the international community. Research in international law and domestic law are similar in their basic requirements: 1) you need a research question, 2) you need to understand the problem you are approaching both in terms of the legal doctrine and its underlying theory, 3) you need a method to answer your question, and 4) you need to rely on primary and secondary sources. International law refers to the collection of laws that are accepted between countries as the laws that will govern the activities that they engage in with one another. International law, as in every legal system, rules are invariably subject to exceptions. This book brings together experts in legal theory and international law to investigate this phenomenon from both a theoretical and doctrinal perspective.
