EDR Demystified stays a step ahead of attackers with this comprehensive guide to understanding the attack detection software running on Microsoft systems and how to evade it. Nearly every enterprise uses an endpoint detection and response EDR agent to monitor the devices on their network for signs of an attack, but that doesn't mean security defenders grasp how these systems actually work. This book demystifies EDR, taking you on a deep dive into how EDRs detect adversary activity. Chapter by chapter, you'll learn that EDR is not a magical black box. It's just a complex software application built around a few easy-to-understand components. The author uses his years of experience as a red team operator to investigate each of the most common sensor components, discussing their purpose, explaining their implementation, and showing the ways they collect various data points from the Microsoft operating system. In addition to covering the theory behind designing an effective EDR, each chapter also reveals documented evasion strategies for bypassing EDRs that red teamers can use in their engagements. This major research study provides a fresh, critical look at the way automobile electronics are and should be built. Written by Silicon Valley pioneer John Hall, this book focuses on key issues emerging as major causes of safety and performance problems. Vehicle makers increasingly seek market advantages by providing ever more capable electronics in their products, but these features add much value to vehicles they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators. By combining decades of design experience and innovation with extensive research, Hall has produced unique insights and explanations so engineers can prevent most or perhaps all of these problems. John Hall is one of Silicon Valley's most prolific independent pioneers and inventors. He founded Union Carbide's semiconductor operation in 1962, he is a founder of Interstil and Micro Power Systems. He is the inventor of the first electronic watch using LCD digital technology and the first CMOS liquid crystal display. He has worked for many American and foreign automakers on specific projects such as integrated two-way radios and seat belt interlocks. He is working with the Department of Defense on hardening electronics systems against non-nuclear events.
