AIDS activists are often romanticized as extremely noble and selfless, however, the relationships among HIV support group members highlighted in landscapes of activism are hardly utopian or ideal. At first, the group has everything it needs: a thriving membership and support from major donors. Soon, the group undergoes an identity crisis over money and power, eventually fading from the scene as government and development institutions embraced activist demands. Decentralizing AIDS care through policies of health systems strengthening civil society was increasingly rendered obsolete.

Charting this transition from subjects to citizens and back again reveals the inefficacy of protest and the importance of community resilience. The product of in-depth ethnography and focused anthropological inquiry, this is the first book on AIDS activists in Mozambique. AIDS activism’s strange decline in Southern Africa is not a reflection of citizen apathy but the direct result of targeted state and donor intervention. The oceans are the graveyards of the lands. As the fringes of Britain’s cliffs and beaches are shrinking and disappearing into the surrounding sea due to coastal flooding, erosion, and landsliding, climate change is speeding up the process.

This book examines how the British coast is changing and what we must do to protect this island nation. Are we doing enough? Should we abandon vulnerable towns and villages to the seas as our forebears did? These are some of the difficult and potentially emotive questions that this book explores—blending contemporary earth science and societal themes with historical and cultural records and a hint of myth and romance for good measure.

This shrinking land is a fascinating study of what we must learn from the past in order to manage the future of Britain’s coasts. With more than 100 illustrations, most of them in color, this is a stunning book. Together we will end AIDS. The new UNAIDS report contains the latest data on new HIV infections, numbers of people receiving antiretroviral treatment, AIDS-related deaths, and HIV among children. The COVID-19 pandemic has caused tremendous loss of human life and disruption of normal daily activities across the globe. The COVID-19 pandemic can be traumatic and have short term and long term influences on individual behaviors and well-being, leading to contain and control the spread of COVID-19. Various public health and social measures, e.g., social distancing, quarantine, isolation, and extensive lockdown of cities have been implemented in countries worldwide. With such social and environmental changes, the prolonged feelings of fear, worry, stress, and the lack of social activities and interaction may greatly increase the prevalence of mental health issues, e.g., anxiety and depression. Nowadays, the internet has permeated into everyone's life, which may play an increasingly important role in coping with COVID-19-related stress and anxiety. However, the increasing reliance on the internet may lead to problematic internet use, prolonged screen time, and sedentary lifestyles and pose great risks to public health.

The oceans are the graveyards of the lands. Lands become eaten away by the action of the seas and it is no surprise to find that most of the world’s shorelines are in a state of erosion. The fringes of Britain’s cliffs and beaches are shrinking, disappearing into the surrounding sea as a result of coastal flooding, erosion, and landsliding. Is climate change speeding up the process? Are our homes, our villages, and town at risk? This book examines how the British coast is changing and why. What is being done to protect this island nation? Are we doing enough? Should we abandon vulnerable towns and villages to the seas as our forebears did and relocate coastal settlements inland? These are some of the difficult and potentially emotive questions that this book explores. Blending contemporary earth science and societal themes with historical and cultural records and a hint of myth and romance for good measure, this shrinking land is a fascinating study of what we must learn from the past in order to manage the future of Britain’s coasts.
