Three introductory chapters provide foundational content for new prescribers in the areas of prescriptive authority, rational drug selection, prescription writing, and promoting positive outcomes of drug therapy. Core drug chapters are focused on the drugs that prescribers will most commonly see in clinical practice. A sharp focus is also placed on pharmacotherapeutic decision making with black box warnings and new bulleted key prescribing considerations. Features of the second edition include completely new chapters on genetic and genomic considerations, muscarinic antagonists, and immunomodulators, and updated content throughout it's everything. Advanced practice nursing and physician assistant students need to be safe and effective prescribers. Introductory chapters tailored to the specific needs of prescribers cover topics such as prescriptive authority, rational drug selection, and prescription writing. Promoting positive outcomes of drug therapy is carefully focused. Pharmacotherapeutic content reflects the drugs most commonly seen and used by prescribers with emphasis not on the first drug discovered or developed in each class, but on the agents most often used today. Primary care drugs are addressed first in each chapter as appropriate. Followed by acute care drugs, unique prescriber focused pedagogical aids further reinforce the most important information for prescribers. Integrated coverage of Canadian trade names appears.

State Assessment Policy and Practice for English Language Learners 2014-05-12

State assessment policy and practice for English language learners presents three significant studies each examining a different aspect of states strategies for including English language learners in state assessments: an analysis of state assessment policies regarding accommodations for English language learners, a survey and description of test translation practices, and an examination of state practices for reporting participation and performance of English language learners in state assessments. With the rise in population of English language learners and the subsequent stepped up legislative focus on this student population over the past decade, states have been challenged to include English language learners in state assessment programs. Until now, the little data available on states' policies and practices for meeting this challenge has been embedded in various reports and professional journals and scattered across the internet. This volume offers for the first time a focused examination of states' assessment policies and practices regarding English language learners. The three studies were supported by OELA, the U.S. Department of Education's Office of English Language Acquisition, Language Enhancement, and Academic Achievement. State Assessment Policy and Practice for English Language Learners is of interest to researchers and professionals involved with the assessment of English language learners, state and district level policy makers, and academics, teacher educators, and graduate students in a number of fields including educational and psychological assessment, testing and measurement, bilingual education, English as a second language, and second language acquisition.
