Disinflation in Transition Economies 1996-12-01

in light of the persistence of moderate inflation in many transition economies this paper analyzes whether inflation resulted from insufficiently tight financial policies and wage pressures or from the protracted adjustment of relative prices using a new database for 21 countries the effect of relative price variability on inflation is estimated within a framework controlling for nominal and real shocks money and wage growth were the most important determinants of inflation relative price variability had a sizable effect at high inflation during initial liberalization and a small effect at moderate inflation cost recovery may contribute to variability particularly in the advanced stages of the transition

decisions made by the food tobacco alcohol pharmaceutical gun and automobile industries have a greater impact on today's health than the decisions of scientists and policymakers as the collective influence of corporations has grown governments around the world have stepped back from their responsibility to protect public health by privatizing key services weakening regulations and cutting funding for consumer and environmental protection today's corporations are increasingly free to
make decisions that benefit their bottom line at the expense of public health lethal but legal examines how corporations have impacted and plagued public health over the last century first in industrialized countries and now in developing regions it is both a current history of corporations antagonism towards health and an analysis of the emerging movements that are challenging these industries dangerous practices the reforms outlined here aim to strike a healthier balance between large companies right to make a profit and governments responsibility to protect their populations while other books have addressed parts of this story lethal but legal is the first to connect the dots between unhealthy products business dominated politics and the growing burdens of disease and health care costs by identifying the common causes of all these problems then situating them in the context of other health challenges that societies have overcome in the past this book provides readers with the insights they need to take practical and effective action to restore consumers right to health

This book combines elementary theory from computer science with real-world challenges in global geodetic observation based on examples from the geodetic observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GLOS) with regard to Industry 4.0.
the IMF Working Papers series is designed to make IMF staff research available to a wide audience. Almost 300 working papers are released each year covering a wide range of theoretical and analytical topics including balance of payments, monetary and fiscal issues, global liquidity, and national and international economic developments.

in the past two decades many have posited a correlation between the spread of globalization and the decline of the nation state in the realm of national security. Advocates of the globalization thesis have argued that states' power has diminished relative to transnational governmental institutions, NGOs, and transnational capitalism. Initially, they pointed to declines in both global military spending, which has risen dramatically in recent years, and interstate war, but are these trends really indicative of the decline of nation state's role as a guarantor of national security in globalization and the national security state? T.V. Paul and Norrin M. Ripsman test the proposition against the available evidence and find that the globalization school has largely gotten it wrong. The decline in interstate warfare can largely be attributed to the end of the cold war, not globalization. Moreover, great powers—the US, China, and Russia—continue to pursue traditional nation state strategies and regional security.
arrangements like the eu and asean have not achieved much and weak states the ones most impacted by the turmoil generated by globalization are far more traditional in their approaches to national security preferring to rely on their own resources rather than those of regional and transnational institutions this is a bold argument and paul and ripsman amass a considerable amount of evidence for their claims it cuts against a major movement in international relations scholarship and is sure to generate controversy

this paper surveys three types of monetary arrangements it considers how the choice of an exchange rate regime the degree of central bank independence or choice of currency unions or boards depends not only on economic considerations but also on political economy considerations in economic terms the choice of monetary regime will depend on the policy that is best suited to reducing or stabilizing inflation in political economy terms the choice of monetary arrangement will ultimately depend on how independent a country wishes to be from shocks emanating from the rest of the world and the weight politicians attach to influencing economic conditions in their own country

this paper proposes a methodology for testing whether capital flows to developing countries are
determined by economic fundamentals or by purely speculative forces we use the intertemporal
optimizing approach to current account determination as our benchmark for judging the behavior of
capital flows according to this approach capital flows should act as a buffer to smooth consumption
in the face of temporary shocks to national cash flow defined as output less investment less
government expenditures the results are encouraging for a large sample of developing countries
economic fundamentals are indeed found to be the most important determinant of capital flows
