Essentials of Health Promotion 1984
Andre Vanoli focuses on the history of accounting in the second part of the 20th century. The book discusses the relations between economic theories and the observation of the present and the past, viewed from an economic measurement standpoint. Some parts are particularly devoted to the French experience in this field, but the point of view is deliberately universal. The publication is about the birth of national accounting, the evolution of systems of accounts, and accounting issues in the perspective of international harmonization. National accounts as a statistical synthesis, concepts, and their relations with economic theory, uses, and status in national accounting.
