develop the understanding and clinical reasoning you need to provide excellent patient care. 51 skills demonstrations provide illustrated step by step instructions for safe nursing care and include rationales for each step. 29 procedural guidelines provide streamlined step by step instructions for performing basic skills. Unique critical thinking models in each clinical chapter show how to apply the nursing process and critical thinking to achieve successful clinical outcomes. Evidence-based practice chapter shows how nursing research helps in determining best practices. Unique caring for the cancer survivor chapter prepares nurses to care for cancer patients who may still face physical and emotional issues. Case studies include unique clinical application questions and exercises allowing you to practice using care plans and concept maps. The 5 step nursing process provides a consistent framework for care and is demonstrated in more than 20 care plans. 15 review questions in every chapter test your retention of key concepts with answers available in the book and on the evolve companion website. Practical study tools on evolve include video clips of skills, skills checklists, printable key points, a fluid electrolytes tutorial, a concept map creator, an audio glossary, and more. Unique clear streamlined writing style makes complex material more approachable. More than 20 concept maps show care planning for clients with multiple nursing diagnoses. Key points and key terms in each chapter summarize important content for more efficient review and study. Unexpected outcomes and related interventions for each skill alert you to potential problems and appropriate nursing actions. Delegation coverage clarifies which tasks can and cannot be delegated. A glossary provides quick access to definitions for all key terms. A primer on flat rolling is a fully revised second edition and the outcome of over three decades of involvement with the rolling process. It is based on the author's yearly set of lectures delivered to engineers and technologists working in the rolling metal industry. The essential and basic ideas involved in designing and analyzing the rolling process are presented. The book discusses and illustrates in detail the three components of flat rolling: the mill, the rolled metal, and their interface. New processes are also covered, including flexible rolling and accumulative roll bonding. The last chapter contains problems with solutions that illustrate the complexities of flat rolling. New chapters include a study of hot rolling of aluminum contributed by Prof. M. Wells, advanced applications of the finite element method by Dr. Yuli Liu, and by Dr. G. Krallics. Roll design by Dr. J. B. Tiley, and the history of the development of hot rolling mills written by Mr. D. R. Adair and E. B. Intong. Engineers, technologists, and students can all use this book to aid their planning and analysis of flat rolling processes. Provides clear descriptions for engineers and technologists working in steel mills. Evaluates the predictive capabilities of mathematical models. Assignments and their solutions are included within the text. Complications in small animal surgery provides a complete reference to
