Sathy’S Practical Paediatrics 2005 although many books in pediatrics are available both large and small but none teaches a straight forward approach that can be quickly and easily grasped by a medical student intern or a junior resident as a result they are heavily dependent on their senior colleagues for guidance all the time the book is written by 37 specialist s senior doctors from a university teaching hospital most of them are either members or fellows of royal college of paediatrics and child health of uk they possess sound experience in the day to day management of the diseases that they wrote about throughout the book we have tried to maintain a common format for each chapter by first defining the topic with its incidence so as to give an idea about how common the condition is the causes are classified in an order of priority rather than a theoretical list a practical approach to differential diagnosis is discussed based on historical physical examination and primary investigations the specific lab tests needed for confirmation is given according to clinical situation the management is outlined in a simple and practical form as it is practiced at our institution wherever possible we have used tables and algorithms and also tried to incorporate the standard ward protocols to make the management approach uniform and evidence based finally the prognosis and common complications are outlined to understand the need for long term follow up family counseling is especially emphasized as passing exams is an essential aspect of medical training a chapter is especially included to guide the students in this regard we sincerely expect that this book will prove to be a significant step forward in improving the teaching and learning process of all students and junior doctors

example it is sometimes very difficult to differentiate between respiratory and cardiac diseases in infants and between neurological and cardiac conditions in older children and the consequences of
taking the wrong path can be significant this book is a collection of cases highlighting situations which can ensnare even the best cardiologist although they illustrate the importance of taking a
good history and performing a thorough examination the most important lesson is learning to keep an open mind and develop the ability to think laterally as clinicians we need to have the
confidence to make a decision for our patients but also the humility to be able to acknowledge that we don t always get it right first time and it is imperative that we learn from the experience we
hope the reader will find these short chapters interesting and while they are not evidence based medicine in the true sense they do represent a wide range of clinical experience from which we can all learn
